# Nimesha Yasith

Associate DevOps Engineer | AWS & Azure, CI/CD & Automation | AWS Certified Solutions Architect – Associate
+94 77 692 7203 | nimeshayasith@gmail.com | linkedin.com/in/nimesha-yasith | github.com/nimeshayasith

## Profile

Recent Computer Engineering graduate and DevOps engineer with hands-on experience deploying and maintaining applications on AWS and Azure. Two internships (2025–26) building CI/CD pipelines with GitHub Actions and Azure DevOps, automating infrastructure with Terraform and Ansible, and running containerised workloads on Kubernetes. Monitors systems with Prometheus, Grafana and CloudWatch, scripts in Python and Bash, and troubleshoots incidents to the root cause across networking, IAM and databases. Works well with developers and testers. AWS Certified Solutions Architect – Associate (2026).

## Experience

**Intern DevOps Engineer** Aug 2025 – Jan 2026
*The CloudAdvisory* *Remote*

- Delivered 4 Azure infrastructure projects covering Terraform, Docker, Kubernetes and CI/CD, including a 3-environment AKS platform deployed through GitHub Actions (see Projects).

**Intern Software Engineer** May 2025 – Nov 2025
*Boffo System Labs* *Colombo, Sri Lanka*

- Worked with the development team in Agile sprints: built role-based access (5 user roles) and nested-route navigation for a multi-tenant Angular/.NET Core SaaS platform; fixed JWT, CORS, referential-integrity and routing-guard defects.
- Containerised the stack with Docker (health-check startup ordering), supported Terraform, Ansible and Azure DevOps CI/CD pipelines, and built a Selenium/TestNG regression suite (11+ cases, all 5 roles) to catch defects before release.

## Projects

**TETA-Guard – Blockchain-Secured SDVN Attack Detection** *(Final Year Project, Team of 4)* Dec 2025 – Sep 2026

- Designed and built the Hyperledger Fabric network (trust-weighted PBFT endorsement across RSU peers, OBU ledger replicas, `TemporalEchoMitigator` chaincode) giving a tamper-evident audit trail of attack detection and mitigation.
- Built the NS-3 vehicular simulation and an automated test suite for 3 topology-poisoning attacks that checks each one is detected and blocked. *Hyperledger Fabric, Go/Node.js, CouchDB, NS-3, Python*

**SecureStay – Cloud-Native Hotel Booking Microservices** *(Team of 4)* 2025

- Provisioned the AWS platform for a Node.js microservices system with Terraform (VPC, EKS, RDS, ECR, IAM, S3/DynamoDB remote state) and built the GitHub Actions pipeline (plan on PR, apply on merge, manual production approval, EKS health check after apply).
- Diagnosed an EKS pod-scheduling outage as VPC CNI IP exhaustion and fixed it by scaling nodes from 2 to 3 and enabling prefix delegation. *Terraform, EKS, Helm, Docker, GitHub Actions*

**AKS Internal Developer Platform** *(Team, CloudAdvisory Internship)* 2025

- Built a reusable internal developer platform on AKS with modular Terraform (workspaces, shared VNet/NSG/NAT/private-endpoint modules) so Dev, Stage and Prod deploy from identical code; integrated ACR, Key Vault and a private-only MySQL database.
- Ran every change through GitHub Actions and validated deployments across all 3 environments. *Terraform, Azure, Kubernetes, GitHub Actions*

**CloudFix Buddy – AWS Troubleshooting Agent** *(Individual)* GitHub | Oct 2026

- Designed and built solo: React/Vite chat UI, API Gateway + Python Lambda backend, and Amazon Bedrock tool use that runs read-only diagnostic checks for common AWS errors (EC2 SSH, S3 AccessDenied, IAM, Lambda timeouts, Docker).
- Defined the AWS infrastructure in Terraform (S3 remote state, private S3 + CloudFront, CloudWatch logs) with a read-only, input-validated design. *AWS, Bedrock, Lambda, Terraform, React*

**GridPulse – Smart Grid Monitoring & Billing Data Pipeline** *(Team of 3)* GitHub | Sep 2026

- Real-time data pipeline (Kafka, Spark Structured Streaming, Airflow, PostgreSQL) for live zone monitoring, renewable-shortfall alerts and daily household billing, running as 13 Docker services from one command.
- Owned the infrastructure and DevOps side: Docker Compose stack with health checks, Kafka topic design, Airflow scheduling, Spark deployment and checkpointing, and Prometheus + Grafana monitoring of consumer lag and API latency.

**Fullstack Blog App – Terraform & Docker on AWS EC2** GitHub

- Provisioned an EC2 instance and security group with Terraform, bootstrapped Docker via a `user_data` script, and deployed React, Express and MongoDB containers with one Docker Compose command.
- Root-caused Vite env vars "not working" (compile-time, not runtime) and fixed it with Docker build `ARG`s.

## Technical Skills

**Cloud Platforms:** AWS (EC2, EKS, Lambda, API Gateway, S3, RDS, ECR, VPC, IAM, CloudWatch), Microsoft Azure (AKS, ACR, Key Vault, MySQL, Azure DevOps)

**CI/CD & Automation:** Git, GitHub Actions, Azure DevOps, PR-based plan/apply pipelines, manual approval gates, post-deploy verification

**Scripting & Linux:** Python, Bash, Go, Linux (Ubuntu, WSL2), REST APIs

**Monitoring & Observability:** Prometheus, Grafana, CloudWatch, health checks, alerting, structured logging

**Networking & Security:** VPC/VNet design, security groups, NSGs, private endpoints, least-privilege IAM, secrets management (Azure Key Vault)

**Infrastructure as Code:** Terraform (remote state, modules, workspaces), Ansible configuration management

**Containers & Orchestration:** Docker, Docker Compose, Kubernetes (EKS, AKS), Helm

**Production Support & Data:** Incident troubleshooting, root-cause analysis, permanent fixes; Kafka, Spark, Airflow data pipelines, PostgreSQL

## Education

**University of Ruhuna** Feb 2022 – Sep 2026
*B.Sc. Engineering (Hons) in Computer Engineering* *Sri Lanka*

**Kalutara Vidyalaya National School** 2016 – 2019
*GCE Advanced Level: A, B, C* *Sri Lanka*

## Certifications & Awards

**AWS Certified Solutions Architect – Associate** (Oct 2026 – Oct 2029) — aws.amazon.com/verification

**IEEE Xtreme 18.0** (24-hour global coding competition): 29th in Sri Lanka, 377th of 8,700+ teams worldwide

**Network Technician Coursework**, Cisco Networking Academy (Jan 2025)

## Volunteer Experience

**Technical Team Member, Axiom 2.0 Coding Challenge** (Sep–Oct 2024): designed and reviewed technical challenges and supported live sessions. GitHub

**Organizing Committee Member, Xbotics Competition** (Aug–Oct 2023): coordinated the school-category team and event arrangements.

**Volunteer, Mehewara** (Mar 2023 – Mar 2024): university outreach programme supporting O/L students in the district.
